Date of issue: April 2011

OWN BRAND TURNTABLE BEARINGS

To meet the increasing demand for high quality, large diameter bearings Rodriguez GmbH has introduced its own brand of turntable bearings. They are manufactured at its factory in Germany, using branded and in-house tested components. These turntable bearings economically meet the requirements of almost any application and are now also available from R. A. Rodriguez in the UK.

All bearings are of a proven, four-point contact design which allows them to support axial, radial and tilting moment loads. They consist of a single row of balls with a 'gothic arch' raceway and either spacers or spacer balls to ensure smooth running or one-piece separators for low frictional torque. Standard bearing diameters range from 100mm to 3900mm.

Two basic versions are available, the KDL series for light applications where high accuracy is not a pre-requisite and the KDM series that provides a higher order of performance for greater loads. Both are manufactured in high grade carbon steel or stainless steel and shipped pre-lubricated and ready for use.

Both types are available as flanged units or with external or internal gearing and induction-hardened raceways. A choice of heat treatment options, coatings and seals may be specified to suit the application. Fixing can be via standard, equally spaced drilled holes or via tapped holes or even special bolt patterns determined by the customer.

Considerable capital investment in the R. A. Rodriguez GmbH factory near Aachen in Germany has resulted in the company becoming one of Europe's leading suppliers of bearings. In addition to turntable bearings, it also produces a range of drive line products including linear guideways, bearing housings, ballscrews and acmescrews.

-ENDS-

R. A. Rodriguez has over 40 years experience in the supply of precision components to manufacturing industry in the UK, Ireland and Scandinavia. This ISO 9001:2000 company acts as factory representative for a number of the world's leading component designers and manufacturers. Its product programme falls into five divisions – bearings, linear motion, aerospace, conveyor equipment, gears and associated products. R. A. Rodriguez bearing products include the world-renowned Kaydon Reali-Slim® and Ultra-Slim® designs. In the linear motion field, R. A. Rodriguez supplies a range of solutions from components and sub-assemblies through to complete turnkey systems.
