TURNTABLE BEARING LITERATURE

The KAYDON® HS Series turntable bearings, noted for their exceptional high load and thrust capacity for their size, are the subject of a newly released data sheet. Available in the UK, Scandinavia and Ireland from sole distributor, R. A. Rodriguez, these bearings are already proving popular for medium- to heavy duty access and industrial automation applications.

The KAYDON® HS Series is available with outside diameters ranging up to 1200mm and provides four-point contact in deep groove gothic arch raceways. This feature is a major contributor to the products' ability to accommodate moment loads of up to 190 kNm. A rectangular cross-section ensures greater stiffness which reduces distortion and allows lower internal diametral clearance.

Full details on all of the options available within this range are provided on the new data sheet which is available as a hard copy via the R. A. Rodriguez sales office on 01462 670044, email: info@raruk.com or as a download from www.rarodriguez.co.uk
